

A tree instead of a map

Bootstrap consensus tree · Cosine Delta on the same 80 words.
500 replicates (words resampled with replacement); every branch
shown is supported by more than half of them. Rooted on MBh 6.
Dots scale with bootstrap support; numbers are percentages.

The tree recovers the groups the map shows — the epics, the old purāṇic core, the Bhāgavata, the Śivapurāṇa — but it has to force them into nested boxes, so the gradual drift between them is exactly what it hides.
